How can we swap two numbers a = 10, b = 20 in python without using third variable?

Pick one of the choices

☐ a = b

b = a

☒ a,b = b,a

☐ both a & b

☐ b = a

a = b

Clear selection

☆ Python Essentials

Consider the expression given below. The value of X is:
 $X = 2 + 9 * ((3 * 12) - 8) / 10$

Pick one of the choices

☐ 30

☐ 30.8

☐ 28.4

☒ 27.2

Clear selection

☆ Python Essentials

What will be the output?

```
def increment_items(L, increment):  
    i = 0  
    while i < len(L):  
        L[i] = L[i] + increment  
        i = i + 1  
  
values = [1, 2, 3]  
print(increment_items(values, 2))  
print(values)
```

Pick one of the choices
